VGA & Old Legacy Signals

- **High Brightness/High Contrast TFT panel**
- **15 to 60kHz Horizontal Scanning range**
- **40 to 100 Hz Vertical Scanning range**
- **Programmable for non-standard Legacy signals**
- **12Vdc Operation (110/230Vac & 24Vdc options)**
- **EMC Shielded for CE requirements**
- **Optional Touchscreen Integration**

The **29LM081(51UN)** Series of LCD chassis monitors has been designed for industrial applications in the Control field and other users that require a compact VGA monitor with a small footprint and a high brightness display with good viewing angles. The rugged, metal construction of the monitor ensures exceptional stability, especially important when touchscreen operation is necessary. Adjustable top and bottom fixing brackets allow easy mounting of the chassis to a front panel.

The KME A/D board has been designed to accept a wide range of signal timings from 15kHz up to VGA standard, including CGA & EGA legacy signals. Set-up controls for fine tuning of the display are located at the rear of the monitor. Once set, no further adjustments should be required, and the last setting is stored in memory.

Analogue & TTL signals are accepted via a 15D connector and a 2m VGA cable is supplied with the unit. KME can supply 9D-15D or BNC to 15D interface cables as required.
